

Efficiency Through Service Contract

ServiceVISIT is an essential element of the wide-ranging services provided by Kumera Drives Service. ServiceVISIT is a regular service call made by a skilled gear drive specialist. ServiceVISIT ensures trouble-free functioning of the gear drives in our customers' production processes.

Service VISIT

Faultless performance of the power transmission equipment provides better usability of the production process. By letting Kumera Drives Service take care of the maintenance of the power transmission equipment, the customer's staff will be able to focus on the management of the actual production process. All this helps to fulfil the primary purposes of the production process. Additionally, the information gained about the condition of the power transmission equipment and possible maintenance and modernization needs assists in planning future actions.

A ServiceVISIT call consists of an inspection of the functioning of the gear unit and its lubrication, the condition and wearing of the components, as well as of checking the operation and condition of other accessories related to the gear unit. In addition, extra services can be included into a service contract: extending from minor repairs performed during service calls to oil maintenance, overhauls, assembly works or supervision, and spare gear service. All performed actions are recorded in a report.
